Sustainable Development Goal 7: Energy Indicators (2016)

Renewable energy (% of TFEC)	2.8	Access to electricity (% of population)	100.0
Energy efficiency (MJ per \$1 of GDP)	3.5	Access to clean cooking (% of population)	>95

TOTAL PRIMARY ENERGY SUPPLY (TPES)

TPES	2011	2016
Non-renewable (TJ)	19 550	16 423
Renewable (TJ)	614	501
Total (TJ)	20 164	16 924
Renewable share (%)	3	3

Growth in TPES	2011-16	2015-16
Non-renewable (%)	-16.0	+1.6
Renewable (%)	-18.4	+1.0
Total (%)	-16.1	+1.6

Total primary energy supply in 2016

Primary energy trade	2011	2016
Imports (TJ)	25 214	22 371
Exports (TJ)	1 684	1 452
Net trade (TJ)	- 23 530	- 20 919
Imports (% of supply)	125	132
Exports (% of production)	54	54
Energy self-sufficiency (%)	15	16
Net trade (USD million)	- 282	- 175
Net trade (% of GDP)	-6.0	-3.9

Renewable energy supply in 2016

RENEWABLE ENERGY CONSUMPTION

Consumption by source	2011	2016
Renewable electricity (TJ)	11	97
Bioenergy direct-use (TJ)	552	309
Solar+geothermal heat (TJ)	0	0
Total (TJ)	563	406
Electricity share (%)	2	24

Renewable energy consumption in 2016

Consumption growth	2011-16	2015-16
Renewable electricity (%)	+778.3	-0.0
Other renewables (%)	-44.0	+1.0
Total (%)	-27.9	+0.7

Consumption by sector	2011	2016
Industry (TJ)	515	281
Transport (TJ)	0	0
Households (TJ)	13	41
Other (TJ)	35	84
Renewable share of TFEC	4.6	2.8

ELECTRICITY CAPACITY AND GENERATION

Capacity in 2018	MW	%
Non-renewable	249	91
Renewable	24	9
Hydro/marine	0	0
Solar	24	9
Wind	0	0
Bioenergy	0	0
Geothermal	0	0
Total	273	100

Capacity change (%)	2013-18	2017-18
Non-renewable	+ 3	0.0
Renewable	+ 758	+ 26.3
Hydro/marine	0	0.0
Solar	+ 757	+ 26.3
Wind	0	0.0
Bioenergy	0	0.0
Geothermal	0	0.0
Total	+ 12	+ 1.9

Net capacity change in 2018 (MW)

Generation in 2017	GWh	%
Non-renewable	1 032	97
Renewable	30	3
Hydro and marine	0	0
Solar	30	3
Wind	0	0
Bioenergy	0	0
Geothermal	0	0
Total	1 061	100

Per capita electricity generation (kWh)

Renewable capacity in 2018

Net capacity change (MW)

Capacity utilisation in 2017 (%)

Renewable generation (GWh)

TARGETS, POLICIES AND MEASURES

Most immediate clean energy targets & NDCs

ENERGY AND EMISSIONS

Energy-related CO₂ emissions by sector

Elec. & heat generation CO₂ emissions in 2017

Avoided emissions from renewable power

Avoided emissions based on fossil fuel mix used for power

Reduction in power emissions due to RE in 2017

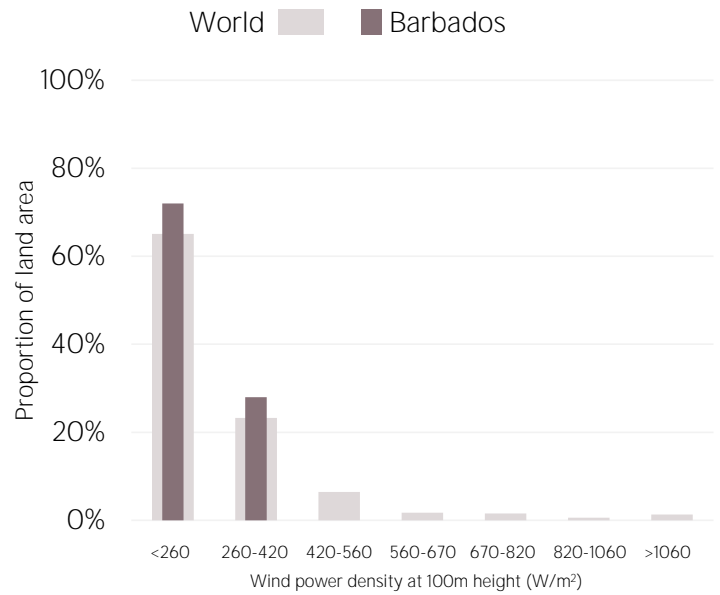

Reduction is RE Avoided divided by sum of avoided and emitted

Distribution of solar potential

Distribution of wind potential

Biomass potential: net primary production

Indicators of renewable resource potential

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

Onshore wind: Potential wind power density (W/m²) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.

Biomass: Net primary production (NPP) is the amount of carbon fixed by plants and accumulated as biomass each year. It is a basic measure of biomass productivity. The chart shows the average NPP in the country (tC/ha/yr), compared

Sources: IRENA statistics, plus data from the following sources: UN SDG Indicators Database (original sources: WHO; World Bank; IEA; IRENA; and UNSD); UNSD Energy Balances; UN COMTRADE; World Bank World Development Indicators; EDGAR; REN21 Global Status Report; IEA-IRENA Joint Policies and Measures Database; IRENA Global Atlas; and World Bank Global Solar Atlas and Global Wind Atlas.

Additional notes: Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. The value of energy trade has been defined as including all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation has been calculated as annual generation divided by capacity x 8,760. Avoided emissions from renewable power have been calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the same amount of power and using the same mix of fossil fuels. In countries and years where no fossil fuel generation occurs, an average fossil fuel emission factor has been used to calculate the avoided emissions.

This note has been produced to provide policy makers with a brief overview of developments in renewable energy in a country. The IRENA statistics team would welcome comments and feedback on its structure and content, which can be sent to statistics@irena.org.
