

COUNTRY INDICATORS AND SDGS

TOTAL ENERGY SUPPLY (TES)

Total Energy Supply (TES)	2015	2020
Non-renewable (TJ)	34 275	41 213
Renewable (TJ)	4 740	4 565
Total (TJ)	39 015	45 778
Renewable share (%)	12	10

Growth in TES	2015-20	2019-20
Non-renewable (%)	+20.2	+8.7
Renewable (%)	-3.7	+9.2
Total (%)	+17.3	+8.7

Primary energy trade	2015	2020
Imports (TJ)	18 731	13 058
Exports (TJ)	16 734	7 851
Net trade (TJ)	- 1 997	- 5 207

Imports (% of supply)	48	29
Exports (% of production)	41	18
Energy self-sufficiency (%)	104	95

Total energy supply in 2020

Renewable energy supply in 2020

RENEWABLE ENERGY CONSUMPTION (TFEC)

Renewable TFEC trend

Renewable energy consumption in 2020

Consumption by sector	2015	2020
Industry (TJ)	2 090	1 790
Transport (TJ)	0	0
Households (TJ)	1 943	2 276
Other (TJ)	3 286	2 982

ELECTRICITY CAPACITY

Installed capacity trend

Renewable capacity in 2022

Net capacity change (GW)

Net capacity change in 2022 (MW)

Capacity utilisation in 2021 (%)

ELECTRICITY GENERATION

Generation in 2021	GWh	%
Non-renewable	742	46
Renewable	866	54
Hydro and marine	847	53
Solar	13	1
Wind	0	0
Bioenergy	6	0
Geothermal	0	0
Total	1 608	100

Per capita electricity generation (kWh)

Electricity generation trend

LATEST POLICIES, PROGRAMMES AND LEGISLATION

- 1 Capacity Building Program on RETs 2013
- 2 Caribbean Community (CARICOM) Energy Policy 2013
- 3 Development of Renewable Energy, Energy Efficiency and Electrification 2013
- 4
- 5

ENERGY AND EMISSIONS

Energy-related CO₂ emissions by sector

Elec. & heat generation CO₂ emissions in

Avoided emissions from renewable elec. & heat

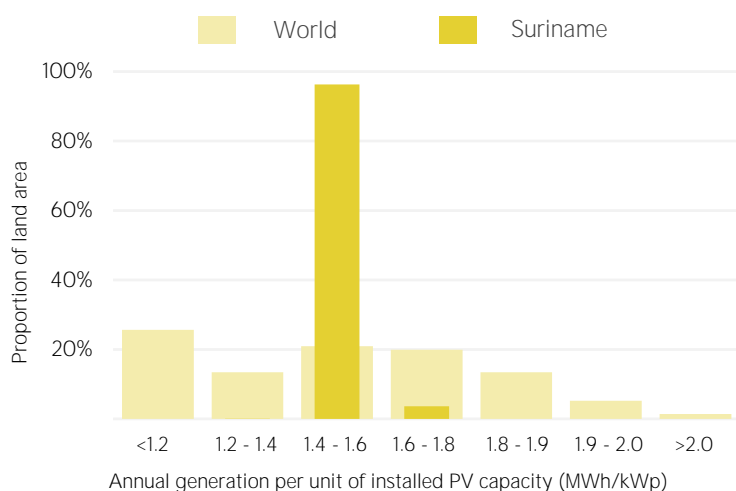

CO₂ emission factor for elec. & heat generation

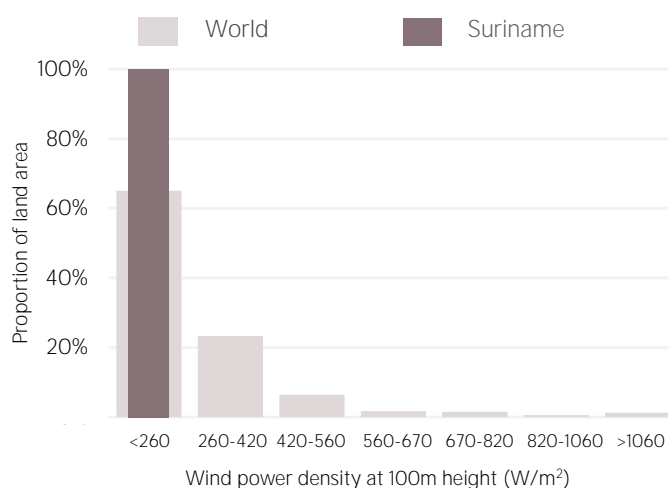

Calculated by dividing power sector emissions by elec. + heat gen.

Distribution of solar potential

Distribution of wind potential

Biomass potential: net primary production

Indicators of renewable resource potential

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

Onshore wind: Potential wind power density (W/m^2) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.

Biomass: Net primary production (NPP) is the amount of carbon fixed by plants and accumulated as biomass each year. It is a basic measure of biomass productivity. The chart shows the average NPP in the country (tC/ha/yr), compared to the global average NPP of 3-4 tonnes of carbon

Sources: IRENA statistics, plus data from the following sources: UN SDG Database (original sources: WHO; World Bank; IEA; IRENA; and UNSD); UN World Population Prospects; UNSD Energy Balances; UN COMTRADE; World Bank World Development Indicators; EDGAR; REN21 Global Status Report; IEA-IRENA Joint Policies and Measures Database; IRENA Global Atlas; and World Bank Global Solar Atlas and Global Wind Atlas.

Additional notes: Capacity per capita and public investments SDGs only apply to developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided emissions from renewable power is calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the same amount of power and using the same mix of fossil fuels. In countries and years where no fossil fuel generation occurs, an average fossil fuel emission factor has been used to calculate the avoided emissions.

These profiles have been produced to provide an overview of developments in renewable energy in different countries and areas. The IRENA statistics team would welcome comments and feedback on its structure and content, which can be sent to statistics@irena.org.
